PROFESSIONAL PROFILE

Senior Analytics Engineer with **5+ years** designing and owning end-to-end analytics platforms, from cloud architecture and dbt modeling to BI delivery and **business adoption**. I turn business questions into reliable numbers and measure impact through decisions enabled, not models deployed.

I specialize in four domains: payment reconciliation across entities and currencies for **Finance**, lead attribution for **Marketing**, stock distribution for **Supply Chain**, and omnichannel reporting for **Sales**. I translate business needs into tested, reconciled Data Marts. I have rebuilt three data platforms from scratch:

- **Solo at Colonies** (Proptech): **225 dbt models** in production, from Finance to Asset Management.
- **On legacy at Kering** (Luxury Retail): a **3,000-line SQL monolith** broken down into dbt models, and the **Refused Store** project, which reduced a nearly **€2M annual revenue loss by 92%**.
- **In a startup at Connecty AI** (Adtech): complete stack: **Snowflake, dbt and Power BI**, with an LLM semantic layer.

COMPETENCIES

Delivery & Business Impact

Business requirements scoping, Product Vision, Roadmap, KPIs & reporting, Variance analysis, Business adoption, Prioritization, Documentation, Jira, Confluence, Notion

Analytics Engineering & Data Architecture

dbt, SQL, ELT, Semantic Layer, Data Warehouse, Medallion Architecture

Data Modeling

Star Schema, Data Mart Design, Normalization (3NF), Conceptual / Logical / Physical Models, UML

Cloud Platforms

GCP (BigQuery), AWS (Athena, Redshift, S3), Snowflake, Databricks

Pipelines & Orchestration

Python, PySpark, Airflow, Airbyte, Terraform, Docker, Linux (Bash), Git

Analytics & BI

Tableau (LOD), Power BI (DAX, Power Query), Looker (LookML), Data Studio, Plotly, Excel

AI & LLM

Prompt Engineering, LLM Benchmarking, AI-Generated SQL Validation, Claude Code

Data Governance & Collaboration

Metadata Modeling, Data Quality (Automated Tests, Profiling, Lineage), Pipeline Monitoring

PROFESSIONAL EXPERIENCE

Colonies

Senior Analytics Engineer Consultant (Data Platform & Reporting)

📅 Mar 2026 – Present

📍 Paris, France

colonies

Context:

Complete rebuild of the analytics platform of a European real estate operator across **4 countries**, moving from **8 fragmented source systems** to a BigQuery foundation giving Finance, Ops, Sales, Marketing and Asset Management a single view of the numbers.

Solo mission, with direct engagement across business and technical stakeholders.

Key Contributions:

- **Consolidated payments** across **6 entities and 4 countries**: **35 Stripe accounts** reconciled into a **Finance Data Mart**, protected by **16 automated quality tests**.
- **Acquisition cost and rental revenue tracked**: leads matched from **Salesforce**, **Pipedrive** and **marketing spend**, with lease lifecycle and portfolio occupancy modeled as reusable dimensions for Asset Management.
- **Industrialized reporting**: dbt Cloud pipelines orchestrated, **139 SCD2 snapshots** for history tracking, and self-service Looker Studio dashboards.

Technical Environment:

dbt (Cloud); BigQuery; Looker Studio; Fivetran; Stripe; Pipedrive; Salesforce; Typeform; Airtable; SQL; GitHub.

Connecty AI

Founding AI Data Analyst

📅 Dec 2025 – Mar 2026

📍 California, USA (Remote)

Context: First analytics hire at an Agentic AI startup to build the internal data stack and validate the LLM SQL engine.

Solo mission

Key Contributions:

- **Generation time halved, from 20 to 10 minutes:** redesigned the **semantic layer** in JSON and the marketing funnel templates.
- **LLM benchmark** covering accuracy, latency and cost through prompt engineering, producing a quantified recommendation that guided the SQL engine selection.
- **Acquisition-to-revenue chain unified:** centralized business logic in dbt across Facebook Ads, GA4 and Shopify, while migrating Power BI DAX transformations into versioned and testable models.
- **Cloud budget controlled:** Snowflake warehouse sizing, query profile analysis and resource monitors deployed to detect cost drift before billing.

Technical Environment:

Snowflake; dbt; SQL; GitHub; Power BI; AI Prompting; Semantic Layer; GA4; Facebook Ads; Shopify.

Kering

Senior Analytics Engineer Consultant (Data Platform)

📅 Feb 2023 – Dec 2025

📍 Paris, France

Context:

Consulting mission within Kering Technologies to modernize and scale the group analytics platform using a **Data Mesh architecture** for global reporting across **Sales, Omnichannel, Consumer Journey, Supply Chain and Marketing**.

Team size: 14, including Data Analysts, Analytics Engineers, Data Engineers and Product Owner.

Key Contributions:

- **Revenue loss reduced by 92%:** launched the **Refused Store** product on my own initiative, with a Tableau dashboard cross-referencing OMS, Salesforce and SAP on in-store order refusals, driving corrective actions on stock distribution.
- **Consolidated group financial reporting:** aggregated international sales across **four brands**, with forex conversion and order lifecycle control for shared commercial KPIs.
- **AWS to BigQuery migration:** migrated the dbt project from AWS Athena and S3 to BigQuery under a Medallion architecture, applying the group Data Mesh strategy.
- **Industrialized data quality:** implemented dbt checks for freshness, volume thresholds and parameter consistency across pipelines, catching anomalies before analysis.
- **Self-service quality monitoring:** built a Tableau dashboard for data quality and functional tests, enabling business teams to identify anomalies and validate key metrics themselves.

Technical Environment:

dbt; Tableau; Power BI; GCP (BigQuery, IAM, GCS); AWS (Athena, Redshift, S3); Git; PySpark; Airflow; Airbyte; Excel; Agile (Scrum); Jira; Confluence; ServiceNow; Terraform; Docker; OMS Manhattan; GA4; Google Search Console.

Accenture

CRM Data Architecture Consultant

📅 Aug 2022 – Jan 2023

📍 Paris, France

Context: **International CRM transformation program** for **Jaguar Land Rover**, integrating data between SAP S/4HANA and Salesforce Marketing Cloud across **5 continents**, serving Sales, Customer Service and Campaigns.

Team size: 3 in Paris + offshore operations team in Mumbai.

Key Contributions:

- **CRM data reliability at international scale:** built SQL extraction and segmentation pipelines automating de-duplication, normalization and cleansing across multiple sources and geographies.
- **Stakeholder and incident management:** coordinated campaign owners, global JLR teams and offshore operations, working with **SAP R&D** to achieve a **95% resolution rate** and stabilize operations through go-live and hyper-care.

Technical Environment:

SAP S/4HANA; Salesforce Marketing Cloud; SQL; Tableau; UML; Data Integration & ETL; Incident Management.

Veepee

Data Governance Engineer

📅 Feb 2022 – Jun 2022

📍 Paris, France

Context: Post-acquisition integration: unifying the data of acquired companies within a centralized cloud warehouse, with shared analytics layers and governance.

Team size: 6

Key Contributions:

- **Business-oriented dbt models:** developed transformation models delivering business-ready datasets to business teams.
- **Data quality and governance:** established quality and governance rules, ensuring reliability across the full data lifecycle.

Technical Environment:

SQL Server; BigQuery; GCP; dbt; GitLab; Jira; Docker; Airflow; Python.

Dassault Systèmes

Data Architecture Engineer

📅 Apr 2021 – Dec 2021

📍 Vélizy-Villacoublay, France

Context:

R&D role on the 3DEXPERIENCE platform, owning the data architecture of scalable SaaS systems.

Team size: 6

Key Contributions:

- **Data lake foundations:** engineered data models, metadata frameworks and storage layers for scalable SaaS systems.
- **Data and application integration:** integrated components through WebAssembly and Emscripten, aligning the data system with application constraints.

Technical Environment:

SQL; XML; JSON; C++; WebAssembly; Emscripten; JavaScript; Linux.

EDUCATION

Master of Software Engineering in Big Data & Embedded Systems

ISAE-ENSMA

📅 2020 – 2021

📍 Poitiers, France

Double Aeronautical Engineering Degree in Data and Systems

ISAE-ENSMA – Ho Chi Minh City University of Technology

📅 2015 – 2021

📍 France – Vietnam

- Achieved the **Eiffel Excellence**, **ERASMUS+** and **SEED** fully-funded scholarships.
- Awarded Second Prize in the Vietnam Mathematics Contest 2017.
