PROFESSIONAL PROFILE

Senior Analytics Engineer with **5+ years** designing and owning end-to-end analytics platforms, from cloud architecture and dbt modeling to BI delivery and business adoption.

I specialize in four domains: payment reconciliation across entities and currencies for **Finance**, lead attribution for **Marketing**, stock distribution for **Supply Chain**, and omnichannel reporting for **Sales**. I translate business needs into tested, reconciled Data Marts.

I have rebuilt three data platforms from scratch:

- **Solo** at Colonies: **225 dbt models** in production, from Finance to Asset Management.
- **On legacy** at Kering: a **3,000-line SQL** monolith broken down into dbt models, and the **Refused Store** project, which cut a nearly **€2M** annual revenue loss by **92%**.
- **In a startup** at Connecty AI: complete stack (Snowflake, dbt, Power BI) and LLM semantic layer.

COMPETENCIES

Analytics Engineering & Data Architecture

dbt, SQL, ELT, Semantic Layer, Data Warehouse, Medallion Architecture

Data Modeling

Star Schema, Data Mart Design, Normalization (3NF), Conceptual / Logical / Physical Models, UML

Cloud Platforms

GCP (BigQuery), AWS (Athena, Redshift, S3), Azure (Synapse), Snowflake, Databricks

Pipelines & Orchestration

Python, PySpark, Airflow, Airbyte, Terraform, Docker, Linux (Bash)

Analytics & BI

Tableau (LOD), Power BI (DAX, Power Query), Looker (LookML), Looker Studio, Plotly, Excel

AI & LLM

Prompt Engineering, LLM Benchmarking, AI-Generated SQL Validation, Claude Code

Data Governance & Collaboration

Metadata Modeling, Data Quality (Automated Tests, Profiling, Lineage), Pipeline Monitoring, Documentation, Git, Jira, Confluence

PROFESSIONAL EXPERIENCE

Colonies

Senior Analytics Engineer Consultant (Data Platform & Reporting)

📅 Mar 2026 – Present

📍 Paris, France

colonies

Context:

Complete rebuild of the analytics platform of a European real estate operator: from **8 fragmented source systems** to a BigQuery foundation covering Finance, Ops, Sales, Marketing and Asset Management.

Solo mission

Key Contributions:

- Consolidated Stripe payments from **35 accounts (6 entities, 4 countries)** into a **Finance Data Mart**, safeguarded by reconciliation and **16 automated quality tests**.
- Attributed leads by **matching Salesforce, Pipedrive and marketing spend**, and modeled the lease lifecycle and portfolio occupancy as reusable dimensions for Asset Management.
- Orchestrated dbt Cloud pipelines, including **139 SCD2 snapshots** for history tracking, and rebuilt self-service Looker Studio dashboards.

Technical Environment:

dbt (Cloud); BigQuery; Looker Studio; Fivetran; Stripe; Pipedrive; Salesforce; Typeform; Airtable; SQL; GitHub.

Connecty AI

Founding AI Data Analyst

📅 Dec 2025 – Mar 2026

📍 California, USA (Remote)

Context: First analytics hire at an Agentic AI startup: stood up the internal data stack and validated the LLM SQL generation engine.

Solo mission

Key Contributions:

- Designed and optimized the **semantic layer** (JSON) and marketing funnel templates, halving generation time (from 20 to 10 minutes).
- **Benchmarked LLMs** (accuracy, latency, cost) through prompt engineering, guiding the engine selection.
- Centralized business logic in dbt: models combining Facebook Ads, GA4 and Shopify, from acquisition to revenue, and migrated Power BI (DAX) transformations, now versioned and testable.
- Tuned Snowflake performance (warehouse sizing, query profiles) and deployed resource monitors to control costs.

Technical Environment:

Snowflake; dbt; SQL; GitHub; Power BI; AI Prompting; Semantic Layer; GA4; Facebook Ads; Shopify.

Kering

Senior Analytics Engineer Consultant (Data Platform)

📅 Feb 2023 – Dec 2025

📍 Paris, France

Context:

Consulting mission within Kering Technologies: modernization and scaling of the group's analytics platform (data mesh architecture) for global reporting, with analytics engineering practices implemented across Sales, Omnichannel, Supply Chain and Marketing.

Team size: 14

Key Contributions:

- Launched, on my own initiative, the **Refused Store** project: a Tableau dashboard cross-referencing OMS, Salesforce and SAP on in-store order refusals, driving corrective actions that optimized stock distribution and reduced a nearly **€2M** annual revenue loss by **92%** (2022 global sales).
- Aggregated international sales of **four brands** with currency conversion (forex) and order lifecycle control: consolidated financial reporting and group-wide commercial KPIs.
- Migrated the dbt project from **AWS (Athena, S3) to BigQuery** under a Medallion architecture, applying the group's Data Mesh strategy.
- Implemented dbt checks (freshness, volume thresholds, parameter consistency) across all pipelines: anomalies caught before reaching the analyses.
- Built a Tableau monitoring dashboard for data quality and functional tests, enabling business teams to identify anomalies and validate key metrics quickly.

Technical Environment:

dbt; Tableau; Power BI; GCP (BigQuery, IAM, GCS); AWS (Athena, Redshift, S3); Git; PySpark; Airflow; Airbyte; Excel; Jira; Confluence; ServiceNow; Terraform; Docker; OMS Manhattan; GA4; Google Search Console.

Accenture

CRM Data Architecture Consultant

📅 Aug 2022 – Jan 2023

📍 Paris, France

Context: Mission for **Jaguar Land Rover**: CRM data architecture and integration between SAP S/4HANA and Salesforce Marketing Cloud, serving sales, customer service and campaigns across **5 continents**.

Team size: 3 (Paris) + offshore ops team (Mumbai)

Key Contributions:

- Built SQL extraction and segmentation pipelines automating de-duplication, normalization and cleansing: data integrity guaranteed across multiple sources and geographies.
- Managed incidents with **SAP R&D**: **95%** resolution rate and operations stabilized through go-live and hyper-care.

Technical Environment:

SAP S/4HANA; Salesforce SFMC; SQL; Tableau; UML; Incident Management; Data Integration & ETL.

Veepee

Data Governance Engineer

Feb 2022 – Jun 2022

Paris, France

Context: Unification of the data of companies acquired by Veepee within a centralized cloud warehouse, with shared analytics layers and governance.

Team size: 6

Key Contributions:

- Developed dbt transformation models delivering business-ready datasets.
- Established quality and governance rules, ensuring reliability across the entire data lifecycle.

Technical Environment:

SQL Server; BigQuery; GCP; dbt; GitLab; Jira; Docker; Airflow; Python.

Dassault Systèmes

Data Architecture Engineer

Apr 2021 – Dec 2021

Vélizy-Villacoublay, France

Context:

R&D role on the 3DEXPERIENCE platform, owning the data architecture of scalable SaaS systems.

Team size: 6

Key Contributions:

- Engineered data models, metadata frameworks and storage layers: the groundwork of its data lake.
- Integrated components via WebAssembly (Emscripten), aligning the data system with application constraints.

Technical Environment:

SQL; XML; JSON; C++; WebAssembly; Emscripten; JavaScript; Linux.

EDUCATION

Master of Software Engineering in Big Data & Embedded Systems

ISAE-ENSMA

2020 – 2021

Poitiers, France

Double Aeronautical Engineering Degree in Data and Systems

ISAE-ENSMA – Ho Chi Minh City University of Technology

2015 – 2021

France – Vietnam

- Achieved the Eiffel Excellence, ERASMUS+ and SEED fully-funded scholarships.
- Awarded Second Prize in the Vietnam Mathematics Contest 2017.

CERTIFICATIONS

• Amazon DSP Campaign Certification – Amazon Ads	Jul 2026
• Databricks Fundamentals – Databricks	Jun 2026
• Claude Code in Action – Anthropic	May 2026
• dbt Fundamentals – dbt Labs	Sep 2023
• SQL Advanced Certificate – HackerRank	Mar 2026
• Microsoft Certified: Azure AI Fundamentals (AI-900) – Microsoft	Sep 2023
• ITIL® v4 Foundation - Certification Number: GR671872572ML – PeopleCert	Mar 2026 – Mar 2029
• Looker Certification Path – Google	Mar 2026
• GitHub Foundations – GitHub	Mar 2024 – Mar 2027
• Google Data Analytics Professional Certificate – Google	Jan 2022
• Computational Thinking using Python – MITx (Massachusetts Institute of Technology)	Nov 2020
